

PASTA worksheet

Stages	Sneaker company
I. Define business and security objectives	Make 2-3 notes of specific business requirements that will be analyzed. • <i>Yes, the app has to be able to process payments.</i> • <i>Yes, the app will have back-end processing.</i> • <i>The app should be in compliance with PCI-DSS.</i>
II. Define the technical scope	List of technologies used by the application: • <i>Application programming interface (API)</i> • <i>Public key infrastructure (PKI)</i> • <i>SHA-256</i> • <i>SQL</i> <i>APIs allow the exchange of data between customers, partners, and employees. They also handle sensitive information. A PKI will be used to secure the exchange of online information. The sneaker app will use SHA-256 to protect sensitive user data. The mobile app uses SQL to store information about the sneakers that are for sale, as well as the sellers who are selling them.</i>
III. Decompose application	Sample data flow diagram
IV. Threat analysis	List 2 types of threats in the PASTA worksheet that are risks to the information being handled by the application. • <i>Injection</i> • <i>Session hijacking</i>
V. Vulnerability analysis	List 2 vulnerabilities in the PASTA worksheet that could be exploited. • <i>Lack of prepared statements</i> • <i>Broken API token</i>
VI. Attack modeling	Sample attack tree diagram
VII. Risk analysis and impact	List 4 security controls that you've learned about that can reduce risk. <i>SHA-256, incident response procedures, password policy, principle of least privilege</i>
